概要

設定

Mate

```
dnf install epel-release
dnf install NetworkManager-adsl NetworkManager-bluetooth NetworkManager-libreswan-gnome
NetworkManager-openvpn-gnome NetworkManager-ovs NetworkManager-ppp NetworkManager-team
NetworkManager-wifi NetworkManager-wwan adwaita-gtk2-theme alsa-plugins-pulseaudio atril atril-caja
caja-wallpaper caja-xattr-tags dconf-editor engrampa eom firewall-config gnome-disk-utility
gnome-epub-thumbnailer gstreamer1-plugins-ugly-free gtk2-engines gucharmap gvfs-fuse gvfs-gphoto2
gvfs-mtp gvfs-smb initial-setup-gui libmatekbd libmatemixer libmateweather libsecret lm_sensors marco
mate-applets mate-backgrounds mate-calc mate-control-center mate-desktop mate-dictionary
mate-disk-usage-analyzer mate-icon-theme mate-media mate-menus mate-menus-preferences-category-menu
mate-notification-daemon mate-panel mate-polkit mate-power-manager mate-screensaver mate-screenshot
mate-search-tool mate-session-manager mate-settings-daemon mate-system-log mate-system-monitor
mate-terminal mate-themes mate-user-admin mate-user-guide mozo network-manager-applet
nm-connection-editor p7zip p7zip-plugins pluma seahorse seahorse-caja xdg-user-dirs-gtk
```

インストール後、ログイン画面のギアアイコンから MATE を選択

Mozc

インストール

```
sudo dnf install ibus-mozc mozc
```

設定

```
ibus-setup
```

で設定画面を出して mozc 以外削除。

設定でキーマップを設定。

```
.bashrc
```

```
export GTK_IM_MODULE=ibus
export XMODIFIERS=@im=ibus
export QT_IM_MODULE=ibus
```

ibus-daemon の自動起動設定

```
名前 : IBus daemon
説明 : ibus デーモンの起動
コマンド : /usr/bin/ibus-daemon -d
```
