## memory\_get\_peak\_usage

<http://php.net/manual/ja/function.memory-get-peak-usage.php>

### 例

```
echo "MEMORY0 : " . number_format(memory_get_usage()) . " byte (初期値) <br>";  
  
$strBuffer = str_repeat("ABCDEFGH", 10000);  
echo "MEMORY1 : " . number_format(memory_get_usage()) . " byte (文字列生成) <br>";  
  
$aryBuffer = explode(",", $strBuffer);  
echo "MEMORY2 : " . number_format(memory_get_usage()) . " byte (配列生成) <br>";  
  
unset($strBuffer);  
echo "MEMORY3 : " . number_format(memory_get_usage()) . " byte (文字列解放) <br>";  
  
mb_convert_variables("SJIS-win", "UTF-8", $aryBuffer);  
echo "MEMORY4 : " . number_format(memory_get_usage()) . " byte (mb_convert_variables 実行) <br>";  
  
unset($aryBuffer);  
echo "MEMORY5 : " . number_format(memory_get_usage()) . " byte (配列解放) <br>";
```
